Software Engineering and Emerging Technologies. Full-stack developer specialized in frontend development, capable of building user interfaces and backend services. I have participated in hackathons such as the NASA Space Apps Challenge, Talent Land 2025, and ICPC, developing real-world solutions under pressure and in collaborative team environments.

EDUCATION

Universidad Autónoma De Baja California

Software engineer and Emerging Technologies

Ensenada, Baja

California

August 2022 - June 2026

PROFESSIONAL EXPERIENCE

Software Development Department at UABC

Ensenada, Baja California

Full-Stack Developer

August 2025 - May 2026

- Conducted the analysis and design of a ticket management system for work tracking within the department.
- Designed the database infrastructure, including DBMS selection, table normalization, and relationship creation.
- Designed the website using the university's institutional colors and UX principles.
- Developed the frontend of the application, ensuring responsiveness across multiple devices.
- Developed the backend of the application to handle database operations and communication with the frontend.
- Used technologies and tools such as React + Vite, NestJS, Prisma, Figma, and Keycloak.

CAF Ensenada

Ensenada, Baja California

Frontend Developer

May 2025 - June 2026

- Developed a website supporting children with developmental disorders, translating Figma designs into functional code.
- Implemented the design using React + TypeScript with Next.js, ensuring visual accuracy and responsiveness.
- Coordinated weekly progress updates with my direct supervisor to align priorities and proactively resolve blockers.
- Proposed UX/UI improvements that were incorporated into the final design.
- Delivered the assigned module within the established timeline, meeting monthly objectives.

Academic Projects

Cibershield

Ensenada, Baja

California

Frontend Developer + UI/UX Designer

March 2026 - June 2026

- Completely redesigned the interface in Figma, modernizing the user experience of an educational platform focused on phishing detection.
- Implemented the design using React and Tailwind CSS.
- Repository: <https://github.com/AdanCC21/CibershieldFront.git>

Descubre Ensenada

Ensenada, Baja

California

Frontend Developer + UI/UX Designer

December - 2025

- Designed an interactive and intuitive interface for a mobile application focused on tourism in Ensenada.
- Implemented the design using React Native and Tailwind CSS.
- Collaborated with teammates to implement backend communication using GraphQL..
- Repository: <https://github.com/Descubre-Ensenada/Descubre-Ensenada-Frontend.git>

ActOne

Ensenada, Baja

Full-Stack Developer

California

May -2025

- Developed a social network for publishing narrative stories divided into acts, featuring a full-screen “focus mode” for immersive reading.
- Built the full stack using React, NestJS, Prisma, and Tailwind CSS.
- Deployed the application on Google Cloud.
- Repository : <https://github.com/AdanCC21/ActOne.git>

EXTRACURRICULAR

Hackathon Talent Land 2025

Guadalajara Jalisco

Frontend Developer

April - 2025

- Collaborated in the development of an online food ordering application for McDonald's, focused on improving the existing user experience as part of a challenge track.
- Planned and designed features such as an in-app assistant bot, accessibility support for users with visual, hearing, or motor disabilities, and an intuitive interface suitable for both children and adults.
- Designed the application using Figma and Tailwind Colors, taking inspiration from the existing McDonald's application.
- Developed the application using Expo with React Native and Tailwind CSS.
