Adan Gonzalez Ceseña

Frontend Developer (React, Next.js, TypeScript) with full-stack experience

Baja California, Mexico · LinkedIn · GitHub · Portfolio · andan.devp@gmail.com

Frontend developer with over a year of experience building web and mobile applications with React, Next.js, TypeScript and React Native. Experienced in turning Figma designs into responsive interfaces and in building a real end-to-end system with NestJS, Prisma and Keycloak authentication. Able to design simple interfaces and databases and to deploy applications on Vercel and Google Cloud. Seeking a remote junior role in the Pacific time zone (Mexico).

EDUCATION

Universidad Autónoma de Baja California — ***Ensenada, Baja California***
Software Engineering and Emerging Technologies — *August 2022 - June 2026*
Graduated: June 2026
Certification in progress (expected February 2027)

PROFESSIONAL EXPERIENCE

Software Development Department at UABC — **Ensenada, Baja California**

Full-Stack Developer — *August 2025 - May 2026*

- Developed a web system for tracking software projects and tests for the UABC Software Development Department, replacing an informal process (WhatsApp, email and in-person messages) with a centralized platform designed for 8 to 16 users (project leads, testing leads and the department head).
- Proposed the stack and client-server architecture (React + Vite, NestJS, Prisma, REST API) after an initial phase of technology testing and training, and designed the database and the communication between frontend and backend.
- Integrated authentication and authorization with Keycloak, as required by the client: the frontend only handles tokens, while the backend validates identity and permissions on every operation for 4 roles (administrator, department head, testing lead and development lead), plus users without a role.
- Designed the initial interface in Figma using the institutional visual identity and developed the complete frontend in React: dashboard, project list, pending tests and user management (administrator only), with a functional mobile interface.

CAF Ensenada — **Ensenada, Baja California**

Frontend Developer — *May 2026 – Present (paid until Sep 2026; volunteer since)*

- Implemented more than 20 screens with Next.js, React and Tailwind CSS from Figma designs, ensuring visual fidelity.
- Redesigned about 10 core components (header, sidebar, loader, buttons and modals) to make them responsive: the interface had been built only for desktop screens and did not work well on mobile.
- Refactored legacy frontend code: removed duplicated components, modularized sections and generalized modals so they can be reused and customized through styles instead of being edited manually in each case.
- Proposed UX/UI improvements to the existing design after spotting unclear screens and flows during implementation; all were accepted and incorporated.
- Coordinated directly with the project coordinator to decide which improvements to integrate, working in periods.

Academic Projects

Cibershield

Ensenada, Baja California

March 2026 - June 2026

Frontend Developer + UI/UX Designer

- Completely redesigned in Figma an educational web application about phishing (based on an earlier prototype built in a rush): new visual identity, new information structure and new exercise flow, keeping only the name and the icon.
- Implemented the frontend with React, Tailwind CSS and Framer Motion, with 3 screens (home, information and exercises), responsive design and animations, and deployed it on Vercel for public access.
- Built a quiz-style exercise system with 3 difficulty levels, in which the user decides whether prepared emails and SMS messages are fraudulent or legitimate, using the app's own informational material.
- The application was used at a real digital security education event for older adults, coordinated by a university professor.
- Repository: Cibershield GitHub · Page: Cibershield

EXTRACURRICULAR

Hackathon Talent Land 2025

Guadalajara Jalisco

Frontend Developer

April 2025

- Semifinalist at the Talent Land 2025 hackathon (Guadalajara), in the McDonald's challenge: my team's proposal was accepted to compete among multiple teams.
- Designed the interface in Figma and developed the mobile frontend with Expo, React Native and Tailwind CSS for a food-ordering app focused on accessibility for users with visual, hearing, speech and motor disabilities.
- Figma: Design

Hackathon NASA Space Apps Challenge

Ensenada, Baja California

Frontend Developer + UI/UX Designer

October 2025

- Co-designed in Figma and developed the mobile frontend with Expo and React Native for a weather app that gives practical recommendations based on the forecast (for example, avoiding going out if it is going to rain), in response to NASA's weather challenge.
- Included a chat-style section where the user describes their plan and receives a recommendation based on the expected conditions, working in person with my team during a weekend of development (2 days).
- Figma : Design

GOOGLE UI/UX CERTIFICATE

Ensenada, Baja California

November 2025

- Certification focused on designing accessible and inclusive UI/UX experiences for all types of users.
- Certificate: Coursera C2Y0LDWV380R

ADDITIONAL SKILLS

- **Programming Languages** : TypeScript / JavaScript, C++ / C / C#, Python, Java, Dart.
- **Frontend** : React / React Native, Next.js, Vue.js, Angular, Flutter, Tailwind CSS, Bootstrap.
- **Backend** : NestJS, Express.js, Spring Boot, .NET, Prisma ORM, REST APIs, GraphQL.
- **Deployment and tools :** Vercel, Google Cloud (virtual machines), Docker, Git and GitHub
- **Design :** Figma (interfaces and prototypes), Google UX certificate
- **AI Tools :** OpenAI Codex, OpenCode, GitHub Copilot, Claude Code
- **Languages** : Native Spanish speaker, English level B2.
- **Databases :** PostgreSQL, MySQL
